

AC 27/2/13  
Item no. 4.49

# UNIVERSITY OF MUMBAI

**Syllabus for sem V & VI**

**Program: B.Sc.**

**Course: Physics**

(Credit Based Semester and Grading System with  
effect from the academic year 2013–2014)

**T.Y.B.Sc. \_Physics\_ Syllabus : Credit Based Semester and Grading System**

**To be implemented from the Academic year 2013-2014**

**SEMESTER V  
Theory**

| <b>Course</b>  | <b>UNIT</b> | <b>TOPICS</b>                   | <b>Credits</b> | <b>L / Week</b> |
|----------------|-------------|---------------------------------|----------------|-----------------|
| <b>USPH501</b> | <b>I</b>    | Mathematical Methods in Physics | <b>2.5</b>     | <b>4</b>        |
|                | <b>II</b>   | Mathematical Methods in Physics |                |                 |
|                | <b>III</b>  | Thermal and Statistical Physics |                |                 |
|                | <b>IV</b>   | Thermal and Statistical Physics |                |                 |
| <b>USPH502</b> | <b>I</b>    | Solid State Physics             | <b>2.5</b>     | <b>4</b>        |
|                | <b>II</b>   | Solid State Physics             |                |                 |
|                | <b>III</b>  | Solid State Physics             |                |                 |
|                | <b>IV</b>   | Solid State Physics             |                |                 |
| <b>USPH503</b> | <b>I</b>    | Atomic and Molecular Physics    | <b>2.5</b>     | <b>4</b>        |
|                | <b>II</b>   | Atomic and Molecular Physics    |                |                 |
|                | <b>III</b>  | Atomic and Molecular Physics    |                |                 |
|                | <b>IV</b>   | Atomic and Molecular Physics    |                |                 |
| <b>USPH504</b> | <b>I</b>    | Electrodynamics                 | <b>2.5</b>     | <b>4</b>        |
|                | <b>II</b>   | Electrodynamics                 |                |                 |
|                | <b>III</b>  | Electrodynamics                 |                |                 |
|                | <b>IV</b>   | Electrodynamics                 |                |                 |

**Practicals**

|                 |  |          |          |
|-----------------|--|----------|----------|
| <b>USPHP05</b>  | <b>Practicals of Course USPH501 + Course USPH502</b> | <b>3</b> | <b>8</b> |
| <b>USPH P06</b> | <b>Practicals of Course USPH503 + Course USPH504</b> | <b>3</b> | <b>8</b> |

**Scheme of examination: Theory;**

**(A) Internal Examination: 40 marks**

| <b>Sr. No</b> | <b>Particulars</b>   | <b>Marks</b> |
|---------------|--|--------------|
| 1             | One Class Test/case study/online examination to be conducted in the given semester | 20           |

|   |  |    |
|---|--|----|
| 2 | One assignment based on the curriculum to be assessed by the teacher concerned   | 10 |
| 3 | Active Participation in routine class instructional deliveries.  | 05 |
| 4 | Overall conduct as a responsible learner, communication and leadership qualities in organizing related academic activities | 05 |

**(B) External Examination : 60 marks**

- Each theory paper shall be of two and half hour duration.  
Each paper shall consist of FIVE questions. All questions are compulsory and will have internal option.

Q – I is from Unit - 1,

Q – II is from Unit - 2,

Q - III is from Unit - 3,

Q - IV is from Unit - 4,

Q - V will consist of questions from all the FOUR units with equal weightage of marks allotted to each unit.

- Practicals: There will not be any internal examination for practical. The External examination per practical course will be conducted as per the following scheme,

| Sr. No | Particulars of External Practical Examination | Marks% |
|--------|---|--------|
| 1      | Laboratory Work                               | 80     |
| 2      | Journal                                       | 10     |
| 3      | Viva  | 10     |
|        | TOTAL   | 100    |

A candidate will be allowed to appear for the practical examination only if the candidate submits a certified journal of TYBSc Physics or a certificate from the Head of the Department to the effect that the candidate has completed the practical course of TYBSc Physics as per the minimum requirements.

- Visits to industry, national research laboratories, and scientific exhibitions should be encouraged.

## SEMESTER V

### Theory Course - USPH501: Mathematical, Thermal and Statistical Physics

| UNIT       | TOPICS  |
|------------|---|
| <b>I</b>   | <p>1. Differential equations :<br/>Introduction, Ordinary differential equations, First order homogeneous and non-homogeneous equations with variable coefficients, Second-order homogeneous equations with constant coefficients, Second order non-homogeneous equations with constant coefficients.</p> <p>2. Partial differential equations :<br/>Introduction, Some important partial differential equations in Physics, An illustration of the method of direct integration, Method of separation of variables.</p>  |
| <b>II</b>  | <p>1. Fourier series :<br/>Introduction, Fourier cosine and sine series, Change of interval, Fourier Integral, Complex form of the Fourier series, Fourier transforms :</p> <p>2. Fourier transforms: Introduction, Formal development of the complex Fourier transform, Cosine and Sine transforms, The transforms of derivatives(with proof),</p>   |
| <b>III</b> | <p>1. Description of a system :<br/>Why statistical approach, Particle-states, System-states, Microstates and Macro states of a system, Equilibrium and Fluctuations, Irreversibility, The equiprobability postulate, Statistical ensemble, Number of states accessible to a system, Phase space, Reversible processes.</p> <p>2. Thermal and Adiabatic Interactions :<br/>Thermal interaction, Canonical distribution, Energy fluctuations, Entropy of a system in a heat bath, Helmholtz free energy, Adiabatic interaction and enthalpy, General interaction and the first law of thermodynamics, Infinitesimal general interaction, Gibbs free energy, Phase transitions.</p> |
| <b>IV</b>  | <p>1. Statistical Mechanics :<br/>Phase space, The probability of a distribution, The most probable distribution, Maxwell-Boltzmann statistics, Molecular speeds.</p> <p>2. Quantum Statistics :<br/>Bose-Einstein statistics, Black-body radiation, The Rayleigh-Jeans formula, The Planck radiation formula, Fermi-Dirac statistics, Comparison of results, Transition between states.</p>  |

## SEMESTER V

### Theory Course - USPH502: Solid State Physics

| UNIT      | TOPICS  |
|-----------|---|
| <b>I</b>  | Electrical properties of metals :<br>Classical free electron theory of metals, Drawbacks of classical theory, Relaxation time, Collision time and mean free path, Quantum theory of free electrons, Fermi-Dirac statistics and electronic distribution in solids, Density of energy states and Fermi energy, The Fermi distribution function, Heat capacity of the electron gas, Mean energy of electron gas at 0 K, Electrical conductivity from quantum mechanical considerations, Thermionic emission. |
| <b>II</b> | 1. Superconductivity :<br>A survey, Mechanism of Superconductors, Effects of magnetic field, The Meissner effect, The penetration depth, Type I and Type II Superconductors.  |

|            |   |
|------------|---|
|            | 2. Band theory of solids, The Kronig- Penney model (Omit eq. 6.184 to 6.188), Brillouin zones, Number of wave functions in a band, Motion of electrons in a one-dimensional periodic potential, Distinction between metals, insulators and intrinsic semiconductors.  |
| <b>III</b> | 1. Magnetic properties of Matter :<br>Diamagnetism and Paramagnetism, The origin of permanent magnetic dipoles, Diamagnetism and Larmor precession, The static paramagnetic susceptibility. Ferromagnetism- the Weiss molecular field, Comparison of the Weiss theory with experiment, Qualitative remarks about domains, Qualitative idea about antiferromagnetism and ferrites.   |
| <b>IV</b>  | 1. Conduction in Semiconductors.<br>Electrons and Holes in an Intrinsic Semiconductor, Conductivity, Carrier concentrations, Donor and Acceptor impurities, Charge densities in a Semiconductor, Fermi level in extrinsic semiconductors, Diffusion, Carrier lifetime, The continuity equation, The Hall effect.<br>2. Semiconductor-diode Characteristics :<br>Qualitative theory of the p-n junction, The p-n junction as a diode, Band structure of an open-circuit p-n junction, The current components in a p-n junction diode, Quantitative theory of p-n diode currents, The Volt-Ampere characteristics, The temperature dependence of p-n characteristics, Diode resistance. |

**SEMESTER V**  
**Theory Course - USPH504: Electrodynamics**

| UNIT       | TOPICS  |
|------------|---|
| <b>I</b>   | 1. Field lines, Flux and Gauss' law, The divergence of <b>E</b> , Applications of Gauss' law, The curl of <b>E</b> .<br>Introduction to potential, Comments on potential, Poisson's equation and Laplace's equation, The potential of a localized charge distribution.<br>2. First Uniqueness theorem (Without proof), The classic image problem- Infinite conducting plane,  |
| <b>II</b>  | 1. Dielectrics, Induced Dipoles, Alignment of polar molecules, Polarization, Bound charges and their physical interpretation, Gauss' law in presence of dielectrics, A deceptive parallel, Susceptibility, Permittivity, Dielectric constant, Energy in dielectric systems.<br>2. Straight-line currents, The Divergence and Curl of <b>B</b> , Applications of Ampere's Law in the case of a long straight wire and a long solenoid, Comparison of Magneto-statics and Electrostatics. |
| <b>III</b> | 1. Dia-magnets Paramagnets Ferro magnets, Magnetization, Bound currents and their physical interpretation, Ampere's law in magnetized materials, A deceptive parallel, Magnetic susceptibility and permeability.<br>2. Energy in magnetic fields, Electrodynamics before Maxwell, Maxwell's correction to Ampere's law, Maxwell's equations, Magnetic charge, Maxwell's equations in matter, Boundary conditions.   |
| <b>IV</b>  | 1. The continuity equation, Poynting's theorem, Newton's third law in electrodynamics.<br>2. The wave equation for <b>E</b> and <b>B</b> , Monochromatic Plane waves, Energy and momentum in electromagnetic waves, Propagation in linear media, Reflection and transmission of EM waves at normal incidence.   |

### SEMESTER V

The T. Y. B. Sc. Syllabus integrates the regular practical work with a series of demonstration and skill experiments. During the teaching and examination of Physics laboratory work, simple modifications of experimental parameters may be attempted. Attention should be given to basic skills of experimentation which include:

- i) Understanding relevant concepts.
- ii) Planning of the experiments.
- iii) Layout and adjustments of the equipments.
- iv) Recording of observations and plotting of graphs.
- v) Calculation of results and estimation of possible errors in the observation of results.

**i) Regular Physics Experiments :** A minimum of 8 experiments from each of the course are to be performed and reported in the journal.

**ii) Skill Experiments :** All the skills are compulsory and must be reported in the journal. Skills will be tested during the examination through viva or practicals

The certified journal must contain a minimum of 16 regular experiments (8 from each group), with all Skills in semester V. A separate index and certificate in journal is must for each semester course.

There will be two turns of three hours each for the examination of practical courses

(Practical Course – USPHP05)

|         |  |
|---------|--|
| USPHP05 | <ol style="list-style-type: none"><li>1. Determination of “g” by Kater’s pendulum.</li><li>2. Flat spiral spring (Y)</li><li>3. Stefan’s constant <math>\sigma</math></li><li>4. Koenig’s method</li><li>5. R.P. of grating</li><li>6. Goniometer</li><li>7. R.I of liquid using laser</li><li>8. Rydberg’s constant</li><li>9. Edser’s A pattern</li><li>10. Diameter of lycopodium powder</li><li>11. Determination of e/m</li></ol> |
|---------|--|

**SEMESTER V**  
(Practical Course – USPHP06)

|         |   |
|---------|---|
| USPHP06 | 1. Mutual inductance by BG.<br>2. Hysteresis by magnetometer<br>3. Maxwell's bridge<br>4. Band gap of energy.<br>5. Diode as temperature sensor.<br>6. Log amplifier using OPAMP<br>7. High pass (first order active filter)<br>8. Low pass (first order active filter)<br>9. Wien bridge oscillator<br>10. Hall effect<br>11. LM-317 as voltage regulator<br>12. LM 317 as current regulator |
|---------|---|

**Skills :**

1. Estimation of errors.
2. Soldering advanced circuit.
3. Bread board circuit using IC's.
4. Optical Leveling of Spectrometer.
5. Laser beam profile.
6. Use of electronic balance : radius of small ball bearing.
7. Dual trace CRO : Phase shift measurement.
8. BG :  $C_1 / C_2$  by comparing  $\theta_1 / \theta_2$ .

## SEMESTER VI

### Theory Course – USPH604: Special Theory of Relativity and Introduction to Cosmology

| UNIT       | TOPICS   |
|------------|--|
| <b>I</b>   | Relativistic Kinematics: The postulates of the special theory of relativity, Simultaneity, Derivation of Lorentz transformation equations, Some consequences of the Lorentz transformation equations : length contraction, time dilation and meson experiment, The observer in relativity, The relativistic addition of velocities and acceleration transformation equations, Aberration and Doppler effect in relativity, The common sense of special relativity.   |
| <b>II</b>  | Relativistic Dynamics: Mechanics and Relativity, The need to redefine momentum, Relativistic momentum, Alternative views of mass in relativity, The relativistic force law and the dynamics of a single particle, The equivalence of mass and energy, The transformation properties of momentum, energy and mass.  |
| <b>III</b> | Relativity and Electromagnetism: Introduction, The interdependence of Electric and Magnetic fields, The Transformation for <b>E</b> and <b>B</b> , The field of a uniformly moving point charge, Force and fields near a current-carrying wire, Force between moving charges, The invariance of Maxwell's equations.   |
| <b>IV</b>  | <ol style="list-style-type: none"> <li>1. The Geometric Representation of Space-Time: Space-Time Diagrams, Simultaneity, Length contraction and Time dilation, The time order and space separation of events, The twin paradox, The principle of equivalence and general relativity, Gravitational red shift.</li> <li>2. Introduction to Cosmology: The large scale structure of the Universe: Types of galaxies, radio sources, Quasars, Doppler shift and expansion of the Universe, Hubble's law, Radiation background.</li> <li>3. Astronomy in different bands of radiation-Optical, Radio and x-ray astronomy.</li> </ol> |

## SEMESTER VI

The T. Y. B. Sc. Syllabus integrates the regular practical work with a series of demonstration and skill experiments. During the teaching and examination of Physics laboratory work, simple modifications of experimental parameters may be attempted. Attention should be given to basic skills of experimentation which include:

- 1) Understanding relevant concepts.
- 2) Planning of the experiments.
- 3) Layout and adjustments of the equipments.
- 4) Recording of observations and plotting of graphs.
- 5) Calculation of results and estimation of possible errors in the observation of results.

**i) Regular Physics Experiments:** A minimum of 8 experiments from each of the practical course are to be performed and reported in the journal.

**ii) Demo Experiments** : The demonstration experiments are to be performed by the teacher in the laboratory and students should be encouraged to participate and take observation wherever possible.

Demonstration experiments are designed to bring about interest and excitement in Physics. Students are required to enter details of these 'demo' experiments in their journal.

The certified journal must contain a minimum of 16 regular experiments (8 from each practical course), with minimum 6 demonstration experiments in semester VI. A separate index and certificate in journal is must for each semester course.

There will be two turns of three hours each for the examination of practical courses

### (Practical Course – USPHP07)

|         |  |
|---------|--|
| USPHP07 | <ol style="list-style-type: none"> <li>1. Lee's method for thermal conductivity</li> <li>2. Quincke's method for surface tension of Mercury</li> <li>3. Flat spiral spring (<math>\eta</math>)</li> <li>4. R.P. of prism</li> <li>5. Lloyd's mirror</li> <li>6. Double refraction</li> <li>7. FET characteristics</li> <li>8. UJT characteristics</li> <li>9. SCR characteristics</li> <li>10. Photodiode and phototransistor characteristics</li> </ol> |
|---------|--|

|  |   |
|--|---|
|  | 11. Y by flexural method<br>12. Determination of wavelength of a laser using diffraction grating. |
|--|---|

(Practical Course – USPHP08)

|         |  |
|---------|--|
| USPHP08 | 1.M/C using B.G.<br>2.Capacitance by using parallel bridge.<br>3.Transistorized Astable multivibrator<br>4. Transistorized Bistable multivibrator<br>5. Transistorized Monostable multivibrator.<br>6.Schmitt trigger using OPAMP.<br>7.555 Timer Astabe multivibrator<br>8. 555 Timer as Monostable multivibrator<br>9. 555 timer as ramp generator.<br>10. Counters mod 2,5 10.<br>11.Shift register.<br>12 OPAMP as monostable/astable using breadboard |
|---------|--|

**Demonstration Experiments :**

1. Open CRO, Power Supply, and Signal Generator: Discuss block diagram.
2. Data sheet reading for diodes, Transistor, Op amp and Optoelectronic devices.
3. Circuit designing – single stage amplifier, Transistor Multivibrator etc. and testing on breadboard.
4. Equation solver.
5. Amplitude Modulation.
6. Frequency Modulation.
7. Millikan’s oil drop experiment.
8. Zeeman Effect.
9. Michelson’s interferometer.
10. Iodine absorption spectra.
11. Standing waves in liquid using Ultrasonic waves.
12. PC simulation of 8085.
13. Use of PC /  $\mu$ P to control real world parameters.
14. Seven segment display.
15. GM counter
